The paralytic illness of Franklin D. Roosevelt (1882–1945) began in 1921 when the future President of the United States was 39 years old. His main symptoms were fever; symmetric, ascending paralysis; facial paralysis; bowel and bladder dysfunction; numbness and hyperesthesia; and a descending pattern of recovery.

Paralytic illness of Franklin D. Roosevelt - Wikipedia

Parental alienation is the process, and the result, of psychological manipulation of a child into showing unwarranted fear, disrespect or hostility towards a parent and/or other family members. It is a distinctive form of psychological abuse and family violence, towards both the child and the rejected family members, that occurs almost exclusively in association with family separation or ...
