The High-Resolution Site Characterization (HRSC) Focus Area reflects the state-of-the-science for environmental site characterization. HRSC strategies and technologies use scale-appropriate measurement and data density to delineate contaminant distributions in environmental media with greater certainty, supporting faster and more effective remedy selection, design and implementation.

TCE Removal from Contaminated Soil and Ground Water

Landfills have the potential to cause a number of issues. Infrastructure disruption, such as damage to access roads by heavy vehicles, may occur. Pollution of local roads and water courses from wheels on vehicles when they leave the landfill can be significant and can be mitigated by wheel washing systems. Pollution of the local environment, such as contamination of groundwater or aquifers or ...

The Hanford Site occupies 586 square miles (1,518 km²)—roughly equivalent to half of the total area of Rhode Island—within Benton County, Washington. This land is closed to the general public. It is a desert environment receiving under 10 inches of annual precipitation, covered mostly by shrub-steppe vegetation. The Columbia River flows along the site for approximately 50 miles (80 km ...

In TD processes utilizing dryers (or kilns) with rotary drums and direct heating, contaminated soils are heated with an open-flame burner that typically requires excess oxygen. In counter-current operation, the heater is located at the end where solids exit the TD unit and combustion gases flow against the direction of the solids.

Drinking Water Contaminants :: Washington State Department

The Regional Freshwater Plan became operative on 17 December 1999. Plan change 1 to the Regional Freshwater Plan changed rules relating to access to groundwater on the Kapiti Coast, identified minimum flows and allocation limits for three rivers in the region and made small changes to improve the Plan. It became operative on 17 March 2007. Plan change 2 to the Regional Freshwater Plan set ...
