

RUBBER PRODUCTS MANUFACTURING TECHNOLOGY

rubber products manufacturing technology pdf

Rubber Technology is the subject dealing with the transformation of rubbers or elastomers into useful products, such as automobile tires, rubber mats and, exercise rubber stretching bands. The materials includes latex, natural rubber, synthetic rubber and other polymeric materials, such as thermoplastic elastomers. Rubber processed through such methods are components of a wide range of items.

SUPER FLOWCRETE is an interior self-levelling product with a wide variety of applications. It can be used as an underlayment or a wearing surface. SUPER FLOWCRETE has a high abrasion resistance and can be used in warehouse or light manufacturing environments with hard rubber tire forklift traffic. As it accepts integral color or stain SUPER FLOWCRETE can also be used as a decorative topping.

Lyons Manufacturing

Latex is the polymer cis-1,4-polyisoprene – with a molecular weight of 100,000 to 1,000,000 daltons. Typically, a small percentage (up to 5% of dry mass) of other materials, such as proteins, fatty acids, resins, and inorganic materials (salts) are found in natural rubber. Polyisoprene can also be created synthetically, producing what is sometimes referred to as "synthetic natural rubber", but ...
