The late Paleozoic icehouse was the longest-lived ice age of the Phanerozoic, and its demise constitutes the only recorded turnover to a greenhouse state. This review summarizes evidence for the timing, extent, and behavior of continental ice on Pangea in addition to the climate and ecosystem response to repeated transitions between glacial and interglacial conditions.

The polar bear's future is inextricably linked to its sea ice habitat. As climate change continues to reduce the summer extent and winter thickness of sea ice, this presents a real long term threat to the species – less ice will mean increased conflict with humans as bears spend more time on land and seek new sources of food.
