

SHARK IN THE WATER

## **shark in the water pdf**

The basking shark (*Cetorhinus maximus*) is the second-largest living shark, after the whale shark, and one of three plankton-eating shark species, along with the whale shark and megamouth shark. Adults typically reach 6–8 m (20–26 ft) in length. They are usually greyish-brown, with mottled skin. The caudal fin has a strong lateral keel and a crescent shape.

The bull shark (*Carcharhinus leucas*), also known as the Zambezi shark (informally "zambi") in Africa, and Lake Nicaragua shark in Nicaragua, is a requiem shark commonly found worldwide in warm, shallow waters along coasts and in rivers. The bull shark is known for its aggressive nature, and presence in warm, shallow brackish and freshwater systems including estuaries and rivers.

Sharks have keen olfactory sense organs in the short duct between the front and back nasal openings. They can detect blood from miles away: as little as one part per million of blood in sea water may be enough. Sharks have the ability to determine the direction of a given scent based on the timing of scent detection in each nostril. This is similar to the method mammals use to determine ...

Whale shark encounters are highly popular worldwide , earning approximately one third of all global participation and being valued at US\$42 million annually . This activity is popular because virtually anyone can do it (we still categorize this as “shark-diving”, although snorkeling is the primary activity) regardless of in-water experience or training.
