

SKIN COLOR AS A POST COLONIAL ISSUE AMONG ASIAN AMERICANS

skin color as a pdf

Human skin color ranges in variety from the darkest brown to the lightest hues. An individual's skin pigmentation is the result of genetics, being the product of both of the individual's biological parents' genetic makeup, and exposure to sun. In evolution, skin pigmentation in human beings evolved by a process of natural selection primarily to regulate the amount of ultraviolet radiation ...

Human skin color - Wikipedia

This film explores the hypothesis that different tones of skin color in humans arose as adaptations to the intensity of ultraviolet radiation in different parts of the world. Our human ancestors in Africa likely had dark skin, which is produced by an abundance of the pigment eumelanin in skin cells ...

Discrimination based on skin color - Wikipedia

In this case study, students use real data to propose hypotheses, make predictions, and justify claims with evidence, as an exploration of concepts presented in the short film *The Biology of Skin Color*. At specific pause points, students analyze data presented in a scientific figure and interpret graphs to make evidence-based claims using the data and information from the short film.

Merkel cell carcinoma is a rare type of skin cancer that usually appears as a flesh-colored or bluish-red nodule, often on your face, head or neck. It is an aggressive, fast-growing type of skin cancer. Merkel cell carcinoma most frequently develops in older people. Long-term sun exposure or a weak immune system may increase your risk of developing Merkel cell carcinoma.
